

Biased Detector With SMA Male to SMA Female and Negative Video Out Operating From 8 GHz to 18 GHz

The FMMT1008 is a biased Schottky detector that displays an extremely flat frequency response over a broad frequency range from 8 GHz to 18 GHz. The model features Negative video output polarity, with no external DC bias source is required. Additional features include 50 ohm matched inputs, high voltage sensitivity for very small signal detection of 1600 mV/mW typical, and can withstand maximum input power levels up to +23 dBm CW. Operating temperature range is -55°C to +125°C. The compact and rugged cylindrical package supports an SMA male input connector and SMA female output connector and is ideal for use with precision test and measurement, instrumentation, and subsystem assemblies.
