

## 0.5 GHz to 8 GHz Power Detector, Positive Output Slope, +23 dBm Max Pin, SMA

The FMPT1006 is a coaxial packaged Power Detector that operates across a broadband frequency from 500 MHz to 8 GHz. The 50 Ohm design provides a positive output voltage that's proportional to the RF input signal level. Impressive performance includes high voltage sensitivity of 0.5 mV/uW typ, tangential signal sensitivity (TSS) of -30 dBm typ, and low VSWR of 1.1:1 typ. The unit does not require a DC bias voltage, and has maximum RF input power handling of +23 dBm. The low profile pin package is aluminum with Gold plating and supports field replaceable SMA connectors, with a Male RF connector on the input port and a Female RF connector on the output port. With the connectors removed, the package can be drop mounted onto a PWB. The module has an operational temperature range from -40°C to +85°C and is guaranteed to meet a series of environmental test conditions for Altitude, Vibration, Humidity, and Shock.
