

WR-62 Twistable Flexible Waveguide in 36 Inch Using UG-419/U Square Cover Flange with a 12.4 GHz to 18 GHz Frequency Range

The SMW62TF005-36 is one of Fairview Microwave's flexible, twistable sections which operates in the 12.4 to 18 GHz range. It can be twisted and/or bent in both the E and H planes without impairing VSWR or attenuation because of its silver coated helically wound brass body construction. The twistable section is covered in a neoprene jacket which allows the section to be pressurized as well as protecting the waveguide's integrity.
