

**Type N, 7mm Fixed Torque Wrench in Break-Over  
 Type 3/4 inch Bit that is Pre-set to 14 in-lbs**

ST-N-34-BO14 is a break-over type torque wrench with 3/4 bit for type N and 7mm connectors with a preset value of 14 in-lbs. Fairview Microwave's break-over torque wrenches allow accurate mating force when assembling and disassembling a variety of RF coaxial connectors. The unique feature of break-over torque wrenches is that they will "break" at the pivot point once the preset torque value is achieved, effectively preventing the user from over tightening the coupling nut on the connector. Our break-over type N and 7mm torque wrenches are lab-quality tools made with a durable nickel-plated steel alloy wrench head connected to a lightweight, red anodized aluminum handle.

**Notes:**

- For Stainless steel type connectors.
- Do not use on damaged connectors.
- To improve performance of a wrench that hasn't been used recently, actuate the wrench by clicking the wrench head back and forth several times before use. This will spread the lubricant through the internal mechanism.
- Break-over type torque wrenches require smooth consistent application of force. Each torquing action should be completed within 2 seconds. Slower or faster torquing action will detract from accuracy.
